1. Summary

In order to kick-start dissemination activities a basic website was created and made available by the second week of the project. This deliverable describes the website and its functionalities.

2. UNEXMIN website – overall concepts

The website development strategy for UNEXMIN can be summarised as follows:

- 1. Publish information on the project from the very beginning of the project
- 2. Allow sufficient time for the development of a professional website that will deploy services and functionalities outlined in the Communication and Dissemination Plan (D8.4, M4)

In order to meet the above challenge it has been decided that the two websites will be different not just in design, but also in terms of functionalities. The first (basic) website has been developed using a simple Wordpress template that is easy to edit and maintain. This website will remain functional until M6 when it will be replaced by a completely new website, which may have additional functionalities (database functions, Web-GIS, built in community tools, etc – as required). At this stage we do not know what functionalities the final website should have, this is currently being investigated in WP8 in collaboration with all project partners contributing to this activity.

The basic website will be developed and edited until M6, which means updates not just in the content, but also in terms of design. The project image and design elements are currently under development and will be published by M4 in the "Project Image and Stylebook" D8.3.

In terms of pages the basic website has the following menu items:

- Home project overview
- Project Consortium description of the consortium
- News news items, to be updated at least once a month
- Contact us contact form that sends e-mail to coordinator@unexmin.eu

Screenshots are provided in the following pages.

3. The Basic website

The URL of the website is <u>www.unexmin.eu</u>. Additional domains have also been purchased; they will all point to this "main" address.
